

# Changing Forest Cover in the Brazilian Amazon and Cerrado

More than 750,000 km<sup>2</sup> or 18% of the Brazilian Amazon and 825,000 km<sup>2</sup> or 41% of the Cerrado have already been deforested.

In the Brazilian Amazon, **deforestation increased 29%** between 2015 and 2016 and we lost an area equivalent to 3 times the size of New York City.

By conservative estimates, in the Cerrado we have lost **more than the area** of the territory of Puerto Rico per year since 2011.
