

Changing Forest Cover in the Brazilian Amazon and Cerrado

More than 750,000 km² or 18% of the Brazilian Amazon and 825,000 km² or 41% of the Cerrado have been deforested.

In the Brazilian Amazon, **deforestation increased 29%** between 2015 and 2016 and we lost an area the size of x2 Rio De Janeiro Cities.

By conservative estimates, in the Cerrado we have lost **more than 6 times the size** of São Paulo City per year since 2011.
